

## SPOT SPRING SIGHTS Activity Sheet

**Hello April!**

The first full month of Spring, nodding the green light to Summer. Compared to the 8 hours of dull daylight in mid-winter, mid April enjoys a full 13 and a half hours of bright daylight. This amplified light along with the sun higher in the sky is just the tonic we need, and also what the garden requires to get growing with real zeal.

Let the growing frenzy commence!

Pink Bergenia and yellow daffodils

Unfurling zingy green beech leaves

Look closer.

See Mother Nature at work. Buds budding, leaves unfurling—every shade of green is on view!

Spring flowering daffodils and tulips, along with cheery primroses bring bursts of colour and much needed nectar for beneficial insects.

Take a seat by the garden window—even better, take a wander outdoors—and challenge yourself to spot a Spring sight.

Find a Spring related garden word using each of the letters below.

S	S	S
P	P	I
